

OctoGo Historical Rates

per 1,000 kWh usage

At Octopus Energy, we're making green energy the most logical choice by passing on our wholesale rates to you. Our AI tracks energy every five minutes. When costs are low, we set your internet-enabled devices to pre-cool your house or pre-heat your water. Then during a temporary price spike, we lower your energy usage automatically. And we adjust your heaviest energy uses to times when the grid is powered by more solar and wind, making us one of the lowest on the market and incredibly environmentally savvy.

How do your utility companies factor in? A few times per year, your utility company (often referred to as your Transmission and Distribution Service Provider or TDSP) will adjust their rate. Depending on what they choose, this means that the delivery cost of electricity will either increase or decrease. All energy companies do this simultaneously and we can't control the change. Your bill will reflect any rate increases or decreases from your utility company.

	AEP TC	Oncor	CNP	TNMP
Jan 21	8.3	8	8.5	9.2
Dec 20	8.46	7.74	8.46	9.18
